Editor's Index..... f-17
The Subject Index for this volume (Volume 36) will appear in the December 1974 issue as part of a cumulative index for the year 1974.

Information for Authors

Developmental Biology will publish in English original papers bearing on problems of development in the broadest sense; it will contain papers dealing with embryonic and postembryonic development, growth, regeneration, and tissue repair, both of plants and animals. The journal will serve as meeting ground for studies on development employing techniques of a wide range of disciplines, e.g., biochemistry, biophysics, cytology, experimental morphogenesis, teratology, genetics, immunology, microbiology, pathology, pharmacology and physiology.

Articles should not exceed 15,000 words and should be accompanied by an abstract that gives, in 200 words or less, a synopsis of the work including methods and results. *Brief Notes* must not exceed 2000 words. The usual format is: abstract, introduction, methods and materials, results, and discussion, but authors are encouraged to present their material in the most logical and appropriate form. Indicate the address for galley proof. In order to save time, page proofs will not be sent to authors. Our aim is to keep the publication time less than 6 months. Two copies of the manuscript (the original and one carbon) and two copies of the figures should be mailed to Dr. Elizabeth Hay, Department of Anatomy, Harvard Medical School, Boston, Massachusetts 02115.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. They must be typewritten, double-spaced, on one side of white bond paper about 8-½ x 11 inches in size, with the pages numbered consecutively. Include with full length articles a running page headline not exceeding 35 letters and spaces. Use footnotes sparingly, if at all. Cite them, using superscript numbers, in consecutive order in the text. Type them consecutively on a separate sheet. Acknowledgments and figure legends should also be typed, double-spaced, as separate sections.

Tables should be used to condense data referred to in the text. They should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text, and collected at the end of the manuscript. Give each table a concise, descriptive heading. Tables should be so composed that the material they contain can be grasped without reference to the text.

Figures should be numbered consecutively in the order of their appearance and each should have a descriptive legend. Indicate magnifications. Line drawings should be made with India ink on smooth white paper or the equivalent. Where original drawings for the printer's use are larger in size than 8-½ x 11, enclose smaller, unmounted prints for editorial use. Photographs should be unmounted, actual size, labeled and ready for half-tone reproduction. Use glossy prints with strong contrast; photo-offset printing reduces contrast. When several figures make up a plate, mount them on the back of a piece of photographic paper or indicate in some other way how they should be mounted. Use cardboard only to protect the package in mailing. The engraver will tool thin white lines between mounted figures later. Maximum size for figures is 5-½″ x 8″ for double column and 2-⅝″ x 8″ for single column. Where large micrographs are especially helpful, the full page may be utilized (6-⅞″ x 10″). To allow for trimming by the printer, add ⅛″ to width and ¼″ to length of the original print, and place lettering, including figure numbers, no closer than ¾″ to the margin. Figure numbers and lettering should be uniform size, 4–7 mm high. Indicate on the galley proof where the figures are to be placed. Mark all figures with the author's name and address. The author will defray the expense for colored plates. Two pages of half-tone figures per article will be published without cost to the author; a charge of $50 per page will be required for pages in excess of this number. Fifty gratis reprints are supplied. Additional reprints may be ordered when galley proof is returned.

References to the literature may be cited in one of the following forms: Doe (1955) ha observed that . . . ; (Doe, 1955; Doe *et al.*, 1960); (Doe, 1961, p. 250). Use suffixes a, b etc. following the date to distinguish two or more works by the same author(s) in the sam year, e.g., Doe 1960a, b. Arrange literature citations in the bibliography alphabetically ac cording to the surname of the author, using the following order of items: author(s), dat of publication, title of article or book, journal name, volume number, inclusive pages, pub lisher and city (for books only). Abbreviate titles of journals in accord with Chemical Ab stracts' *Service Source Index* (1969 Edition).

Classify your manuscript for editor's indexing when you submit it by answering th following questions:

(1) This manuscript is best described under the category, Developmental Biochem istry____, or Developmental Cytology____, or Developmental Genetics____, or De velopmental Physiology____, or Experimental Morphogenesis____.

(2) Two additional key words or phrases for editor's indexing are:

_____; _____.

(3) I $\begin{matrix}\text{do}\\\text{do not}\end{matrix}$ believe the paper should be included in the Journal's list of possible grad uate and undergraduate laboratory experiments.

Announcements should be sent to the Editor-in-Chief to arrive by the 15th of th month preceding the issue in which the material is to appear. *News, opinion and letter* should be sent to Dr. Eugene Bell, Department of Biology, Massachusetts Institute o Technology, Cambridge, Massachusetts 02138, U.S.A. The correspondence section i not to be used as a medium for rapid publication of data. It is a forum for active exchang of ideas and opinions about research in developmental biology. Half-tone figures are no accepted, but in suitable cases line drawings will be. Material related to *Current Litera ture* should be sent to Dr. Francis J. Manasek, Department of Anatomy, Harvard Medi cal School, Boston, Massachusetts 02115, U.S.A.

ATTENTION AUTHORS

Photographs submitted for publication **must** be actual size for reproduction. Manu scripts received in the future which do not follow this rule will be returned unreviewe to the authors. The page size of the journal should be considered and the following forma observed. (1) Column width figures are to be no wider than 2⅝ in. or longer than 8 in (2) Page size figures should be 5½ in. wide and no longer than 8 in. (3) If the author de cides to bleed the page (no margins), the figure must be 6⅞ × 10 in. (submitted a 7 × 10¼ in. to allow trimming); if the figure to be bled is under this size in eithe width or length it will not be accepted. Neither this office nor Academic Press has th staff that would be needed for artwork or to properly calculate half-tone reduction. There fore, in current issues some serious errors in size of half-tone reproductions have bee made. In order to correct them from page proof, we would have had to delay publicatio of the journal and we chose not to penalize the other authors by doing that. **Author should go over galley very carefully** because page proof is not sent them; be sur line drawings are properly reduced and that none were produced as half-tones by mis take. It is not necessary to submit the original for a line drawing if it is too large; a goo copy reproduces well. When preparing line drawings, please keep the page size (5½ × 8 in.) in mind and indicate the reduction. Your cooperation will help us keep our artwor up to standard in this difficult time.

Elizabeth D. Ha
